

## **The FCC Narrowbanding Mandate and your existing radio system**

Did you know that action the FCC took in 2004 could render all or part of your public safety radio system obsolete by 2013?

Do you know that failure to address this issue in a timely manner may make your public safety operation, local or state government jurisdiction, or higher learning institution liable for punitive assessments or fines?

For more information on how to prepare or questions on your FCC license [you are invited to attend one of our hosted Commonwealth of Virginia Radio Narrowbanding Clinics for public safety operations, local or state government jurisdictions, or higher learning institutions at various locations throughout the State. These are individual sessions for each participant.](#)
