Nearline storage typically refers to a tape or optical **jukebox** in which robotic arms retrieve tapes/CD's/DVD's/Blu-ray's automagically and insert them into a drive to read/write data. <http://appliedradiology.com/articles/demystifying-data-storage-archiving-options-for-pacs>

A **disk array** is a hardware element that contains a large group of hard disk drives (HDDs). It may contain several disk drive trays and has an architecture which improves speed and increases data protection. The system is run via a storage controller, which coordinates activity within the unit. http://www.webopedia.com/TERM/D/disk_array.html Note that disk arrays can be a part of a SAN sooooo until further information is known about these disk arrays, am keeping them as a separate entity.

VITA Draft Discussion Document // REV - 082817

PURPOSE: To depict VITA Disk Array and Jukebox locations in the Commonwealth of Virginia (COV) using the VEC (VEDP) 2014 high tech employment by region map with PARS information provided by Mr. John Del Grosso, and other supporting/correcting information.
