COV resources can be allocated away from email system maintenance to more business critical applications.
Google Vault – aka Hosted Mail Archiving (HMA) – is an enterprise-wide messaging archiving service solution allowing any customer subscribed to Google Messaging to archive all inbound and outbound email. The messaging archiving service is an enterprise-wide solution that allows any customer subscribed to Google Messaging to archive all inbound and outbound email. The solution includes the following features:

- Messaging Archiving: The system includes the ability to archive all email messages sent and received by all users of the messaging service.
- Search & Discovery: The service includes a powerful search engine that allows users to search for specific email messages based on keywords, dates, or other criteria.
- Retention & Archiving: The system allows users to set specific retention policies for email messages, including automatic deletion or archiving.
- Data Loss Prevention (DLP): The solution includes advanced DLP capabilities to protect sensitive data from accidental or intentional disclosure.
- Reporting & Analytics: The system includes comprehensive reporting and analytics tools to help organizations understand their email usage patterns and compliance status.
- Compliance & Legal: The solution includes compliance features that help organizations meet regulatory requirements for data retention, security, and privacy.

Google Vault 101:
