Virginia Health Innovation Plan 2015: State Innovation Model (SIM) Design

February 19, 2015

Beth A. Bortz | President & CEO

The Virginia Center for Health Innovation

- **Mission:** To work in partnership with multiple stakeholders to accelerate the adoption of value-driven models of wellness and health care throughout Virginia.
- **Vision:** The Virginia Center for Health Innovation is envisioned as a nonprofit, nonpartisan, consumer-centered, trustworthy vehicle for sparking and sustaining health innovation in Virginia. The Center will advance the vision of Virginia as a national leader in individual health, community health, health care, and economic growth.

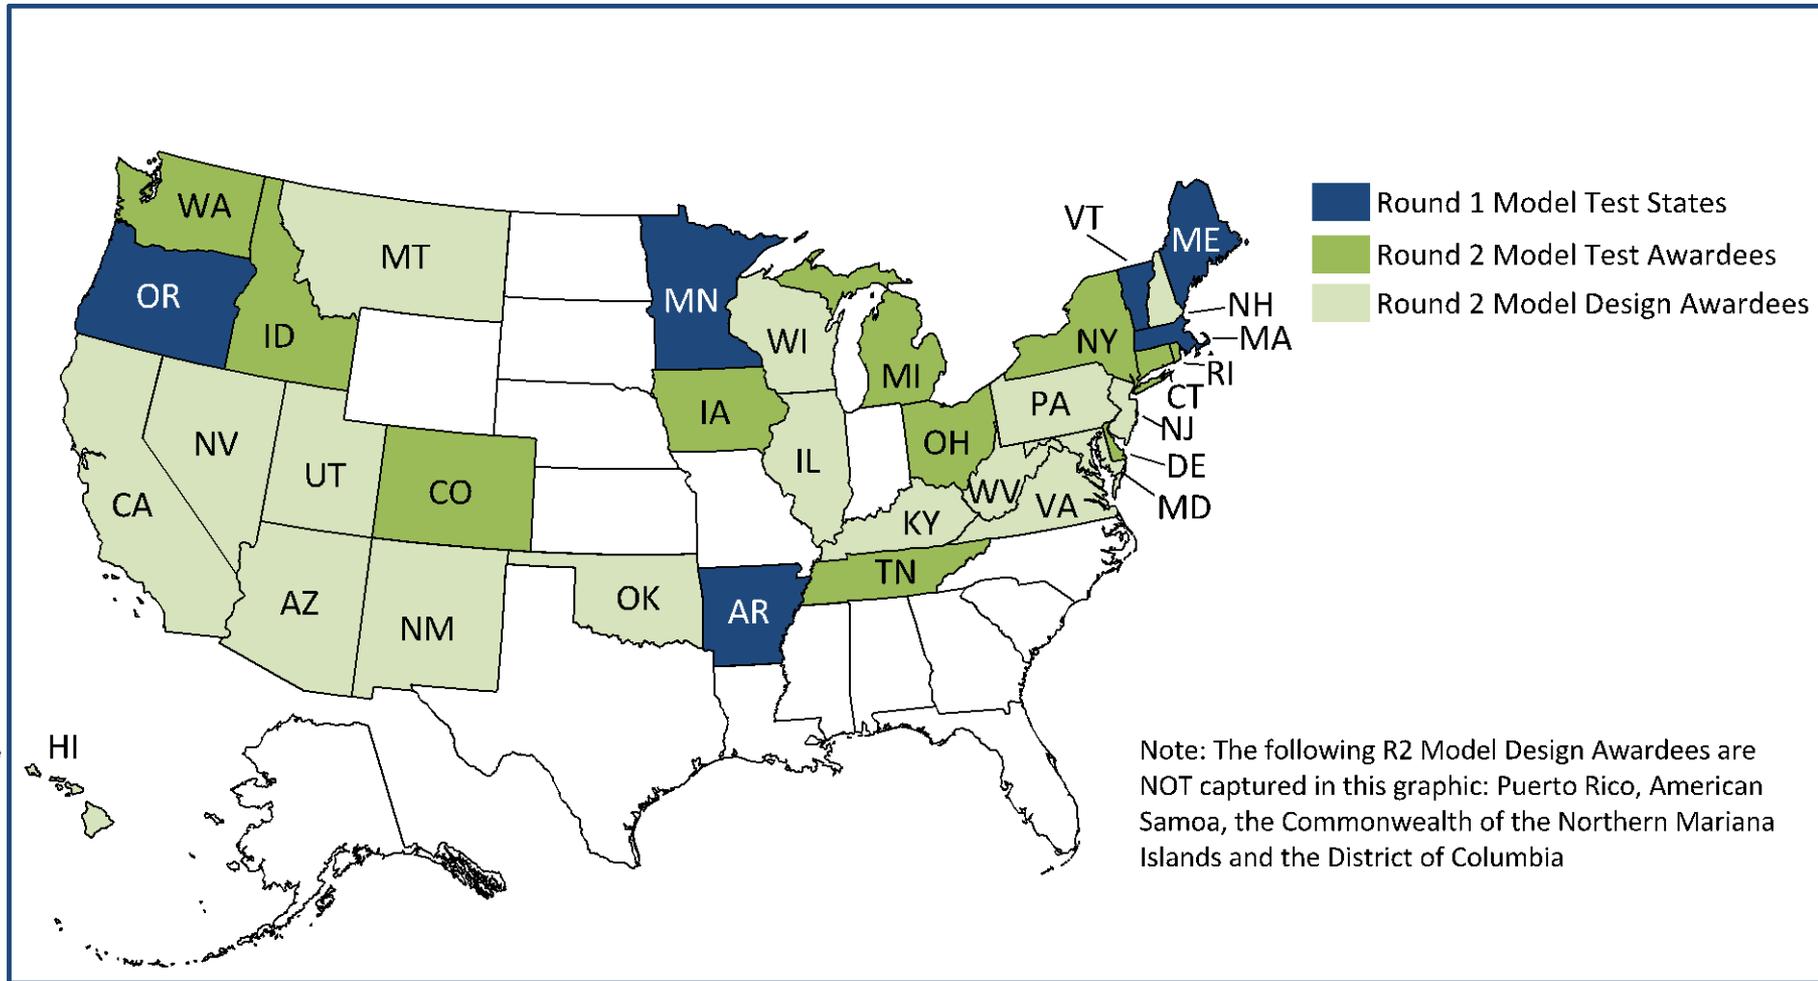

The State Innovation Model (SIM) Initiative

- Provides **financial and technical support** to states for the development and testing of state-led, multi-payer health care payment and service delivery models that will:
 - ✧ improve health system performance,
 - ✧ increase quality of care, and
 - ✧ decrease costs for Medicare, Medicaid and CHIP beneficiaries—and for all residents of participating states.
- In December, CMS announced **32 winners** of the Round 2 awards.
 - ✧ These join the six states that received four year Model Testing awards in 2013, bringing the total number of engaged states or territories to thirty-eight.
 - ✧ CMS estimates these grants will collectively cover 61% of the U.S. population.

The State Innovation Model (SIM) Initiative

- Of the new winners, eleven states received Model Testing grants totaling \$622M. These are: CO, CT, DE, ID, IA, MI, NY, OH, RI, TN, and WA. All but Idaho and Tennessee have expanded Medicaid, and Tennessee is still considering an expansion. All eleven had received Round One Model Design or Model Pre-Testing Awards in 2013
- Seventeen states, 3 territories, and the District of Columbia received Model Design grants totaling \$42M.
- **Virginia received a grant totaling \$2.6 M.**

SIM Round 2 Awardees

Action Strategies

Quality, Payment Reform, & HIT

Accountable Care Communities

Primary Care Transformation

Integrated Care

Action Strategies

Care Transitions

Telemedicine & Remote Patient Monitoring

Workforce

Choosing Wisely & VBID

DSRIP Under a Medicaid Waiver

Priority Populations

- Action strategies will benefit all Virginians, with special emphasis on:
 - Regional health promotion and prevention
 - Effective treatment for populations with chronic conditions
 - Integration of primary care and behavioral health for populations with multiple diagnoses.
